Docks and Floats

Quaibec designs, manufactures and distributes high-density polyethylene (HDPE) floating docks. Each and every Quaibec dock meets the most stringent construction criteria and has unique features that make it the best floating dock bar none. Tough, durable and carefully designed, Quaibec docks are made to fit your needs.

A Significant Innovation

Unlike traditional floating docks requiring several individual flotation boxes, Quaibec docks use tube-shaped, one-piece HDPE floats.

This has numerous benefits:

Excellent Swell Resistance:

The one-piece structure is more rigid and stable, even in rough conditions.

Ice Resistant:

Ice cannot form on the tube-shaped float, which means you can leave your dock out in the water year round, usually without any problems!

Safer:

Because Quaibec floats have no sharp corners or edges, they're safer for boats and swimmers.

Flexible Design:

Several sections can easily be connected together to create a dock that fits your needs.

Commercial Docks

A Solid Base for Your Business!

Quaibec has solid expertise with businesses and organizations and provides a customized, eco-friendly solution.

- Fish farming
- Aquaculture
- Marinas
- Municipalities
- Outfitters
- Mining companies
- etc.

Assembly

Easy-to-assemble Quaibec docks can be configured to meet your needs.

Whatever your needs, Quaibec can build a barge, platform or dock according to your specifications.

Residential Docks

Make the Most of your Lake!

If you have a waterfront cottage, hunting camp or residence, a Quaibec dock will be your best investment! Extremely durable, virtually maintenance free and safe, your Quaibec dock will give you great water access.

Respect your lake's ecological balance! HDPE floats exclusive to Quaibec will not deteriorate over time. Since they float, there are no pillars or fill to disturb the river or lake bottom.

High-density Polyethylene, the Ideal Material

HDPE has several unique characteristics, which make it the perfect material for designing durable and practical floats.

- HDPE has an infinite useful life
- HDPE requires no maintenance
- HDPE is light-weight and easy to remove from the water
- HDPE does not deteriorate
- HDPE respects a lake's ecological balance
